

Brand Guidelines

Turning Ideas Into Digital Solutions.

OSP Tech is the brand of OSP Technologies, an IT, web and design company based in Morogoro, Tanzania. The identity is built from three things: the linked **OSP icon** (two chain links that read as “OSP”), the bold italic **wordmark**, and the **60° slash**, the angle shared by the logo’s cuts and bars. Everything else (colours, type, layouts) supports those three.

Personality

- **Confident and forward-moving.** The italic wordmark and the 60° slash lean forward. Layouts should feel energetic but uncluttered.
- **Professional, not corporate.** Clean white or deep navy grounds, generous space, one strong headline.
- **Local and practical.** Plain, friendly language. English or Kiswahili, never both in one headline.

The logo family

Version	Looks like	Best for
Primary horizontal (with tagline)	Icon + OSP Tech + tagline in one line	The “full signature”: covers, banners, letterheads, website footer, presentations, link previews
Horizontal, no tagline	Icon + OSP Tech	Website header, email signature, watermark on posts, invoices, small spaces
Stacked (with or without tagline)	Icon above the words	Square or tall spaces: business card front, posters, roll-up banners, video intro/outro, signage
Icon only	The linked OSP mark	Profile pictures, favicon, app icon, watermark, merchandise, stamps, anywhere under 40px wide
Wordmark only	OSP Tech (+ tagline)	Rare. Only when the icon already appears nearby (e.g. next to the profile picture) or in a very thin strip

Each version comes in four colourways: **colour** (light backgrounds), **on-dark** (navy or dark photos: the bars and words turn white), **white** (brand blue or busy photos) and **navy** (one-colour printing, stamps, photocopies, engraving).

Which logo goes where

Social media

Place	Use	Why
Profile picture (Instagram, Facebook, WhatsApp Business, TikTok, LinkedIn, X)	Icon only on navy (default) or white	The picture is cropped to a small circle; words become unreadable. Your account name already says “OSP Tech”
Facebook / LinkedIn / X / YouTube cover	Primary horizontal with tagline , on-dark	Wide space and the first thing visitors read; keep it clear of the profile picture overlap (left side on LinkedIn)
Instagram feed posts and carousels	Horizontal, no tagline , small in one corner (about 30% of the width)	Brands the post without competing with your content
Last slide of a carousel / call-to-action post	Stacked with tagline , centred	The sign-off moment; the tagline does the selling
Stories and Reels	Icon or horizontal, no tagline at the top; stacked on the final frame	Small screens: keep it simple until the end
Client work you post (portfolio)	Icon watermark , white or navy at 15–25% opacity	Protects your work without ruining it

Website

Place	Use
Header / navigation bar	Horizontal, no tagline (SVG), 32–44px tall. On phones under 360px wide, switch to the icon only
Hero section	No logo needed (it is already in the header). Put the tagline as the headline in display type instead
Footer	Primary horizontal with tagline or stacked , on navy (on-dark version)
Browser tab (favicon)	Compact icon (links without bars). Full favicon set is in the kit
Link preview when shared on WhatsApp / social	Primary horizontal with tagline on white (website-link-preview image)

Documents and print

Place	Use
Letterhead, quotations, invoices, reports	Primary horizontal with tagline , top-left, 60–70mm wide. Tagline may repeat in the navy footer
Business card, front	Stacked with tagline , on navy
Business card, back	Icon only , beside your contact details
Email signature	Horizontal, no tagline , 160px wide
Rubber stamp, embroidery, engraving, photocopies	Navy (one colour) icon or horizontal version
T-shirts, caps, mugs, stickers	Icon on the chest, cap or sticker; horizontal across the back of shirts
Roll-up banner, poster	Stacked with tagline at the top
Wide banner, shop sign, vehicle	Primary horizontal with tagline
Presentations	Title and closing slide: primary ; other slides: icon small in a corner

Simple rule of thumb

1. **Space is wide** → horizontal. **Space is square or tall** → stacked.
2. **Logo will be small** (under about 220px / 45mm wide) → drop the tagline.
3. **Smaller still** (under about 120px / 25mm) or **cropped to a circle** → icon only.
4. **Dark background** → on-dark. **Photo or brand blue background** → white. **One ink only** → navy.

Clear space and minimum size

- **Clear space:** keep empty space around the logo at least equal to the height of the navy bars under the icon (about 14% of the icon's height) on every side.
- **Minimum sizes:** primary with tagline: 45mm print / 220px screen. Horizontal without tagline: 25mm / 120px. Icon: 8mm / 24px (below 32px use the compact icon, which drops the bars).

Colour

Use the colours roughly in this proportion: **60% white or navy ground, 30% brand blue, 10% teal**. Teal is the accent; use it for one key word, a line or the slash graphic, never for large areas.

Colour	HEX	RGB	CMYK (approx.)	Role
Brand Blue	#3871FC	56, 113, 252	78, 55, 0, 0	Logo, wordmark, big headlines, blocks
Brand Teal	#04BCC8	4, 188, 200	75, 0, 22, 0	Accent, highlights
Brand Navy	#081B33	8, 27, 51	95, 80, 45, 60	Dark backgrounds, logo bars, body text

Colour	HEX	RGB	CMYK (approx.)	Role
Blue Strong	#2457D6	36, 87, 214	85, 65, 0, 0	Small links and button text on white
Cloud	#F3F6FB	243, 246, 251	3, 1, 0, 0	Light section backgrounds
Slate	#5B6576	91, 101, 118	60, 45, 30, 15	Secondary text

Accessibility: brand blue on white is 4.25:1, fine for headings 24px and up but use **blue-strong** for small text. Teal on white is decorative only; teal on navy is excellent (7.4:1).

When printing, ask the print shop for a proof: CMYK values are approximate and screens are brighter than paper.

Typography

One family: **Poppins** (free from Google Fonts, works in Canva, Word, websites).

- **Display: Poppins ExtraBold Italic** (800 italic). Matches the wordmark. Headlines on posts, banners and title slides only, short phrases.
- **Headings: Poppins Bold / SemiBold**, upright.
- **Body: Poppins Regular**, 16px on web, 10–11pt in documents.
- **Labels: Poppins SemiBold, uppercase, slightly spaced** (e.g. FOUNDER).
- **Fallback** where Poppins is not installed: Arial.

The 60° slash (graphic element)

Two or three parallelogram bars cut at 60°, in blue then teal, usually bleeding off a bottom or right edge. It comes straight from the logo's angle and is the brand's signature graphic. Use it once per layout: a corner of a post, the end of a footer band, the edge of a business card. Do not use it as a busy repeating pattern.

A very faint, oversized icon (navy a shade lighter than the background) may sit behind content on navy layouts for depth.

Voice

- Short, clear, benefit-first: "We build websites that bring you customers." not "We leverage cutting-edge solutions."
- Speak to Tanzanian businesses directly ("you", "your business").
- Kiswahili versions are welcome; keep the tagline in English as part of the logo.

Don'ts

- Don't stretch, squash, rotate or add shadows, glows or outlines to the logo.
- Don't change logo colours outside the four colourways, or recolour parts of it.
- Don't rebuild the wordmark in another font or type "OSP Tech" in plain text next to the icon instead of using the logo file.
- Don't put the colour logo on brand blue or on busy photos (use white), or the colour logo on navy (use on-dark).
- Don't use teal for long text on white.
- Don't place the logo inside a box or circle except for profile pictures and app icons.

Files in the kit

The downloadable brand kit (OSP-Tech-Brand-Kit.zip) is organised as: 01-Logos (every version and colourway as SVG and high-resolution PNG, plus favicons), 02-Social-Media (profile pictures, post, story, cover and banner templates, link preview, watermarks), 03-Print (business card print PDF with bleed, letterhead PDF and Word template), 04-Email-Signature. **SVG** files are the masters: use them for websites, print shops and anything that must scale. **PNG** files are for Canva, Word, PowerPoint and social apps.
